FRIIpower Wireless Shaver *from* Integrated Endoscopy.

FRIIpower is a “breakthrough” product in the field of **arthroscopic powered cutting instruments**.

IE’s wireless shaver is a cutting-edge arthroscopic surgical tool for precise joint procedures. Engineered for optimal control and comfort, it offers versatility in tissue resection and joint debridement. With customizable settings and a robust design, the wireless shaver sets a new standard, ensuring surgeons achieve exceptional performance with a cost-effective solution.

Standard functions:

Forward and oscillating mode for soft tissue and bony tissue resection. All functions are managed by hand control for complete freedom to operate.

Enhanced Functions:

Rotating blade for adjustable cutting-edge orientation on target. Adjustable lever for fragments suction.

Wide selection of speed:

More than 6,000 rpm to assure high performance in every surgical condition. Seven pre-settings for the ideal speed for specific procedures, letting you choose between 49 speed combinations.

Removable battery:

The high power brushless motor combined with a long-life battery, delivers plenty of power to assure the ideal torque required for all arthroscopic procedures.

FRRIIpower Wireless Shaver

The beginning of a new approach in arthroscopic surgery

FRRIIpower consists of two components: **a reusable internal module containing the system core** (the electric supply source, the power source and the control unit) and **an external single-use operating body**, capable of resecting and removing soft tissue

The result is a light and ergonomic handpiece, ready to use without preparation or sterilization, making the arthroscopic surgery more effective, with really innovative features.

Shaver Handle w/ Blade / Bur
